Merger set to advance Helix research

The new Helix facility will be located at 3333 Helix Street in Baton Rouge. It will be an important part of the Louisiana Helix Research Center, which is a partnership between the University of Louisiana at Lafayette and the University of Mississippi.

The new facility will include state-of-the-art equipment and laboratories for research in the fields of environmental science, health sciences, and biotechnology. The research conducted at Helix will focus on issues such as water quality, public health, and sustainable agriculture.

The merger is expected to bring together the expertise of both universities and to provide opportunities for collaboration on research projects. The Louisiana Helix Research Center is an important component of the University of Louisiana at Lafayette's strategic plan to increase the university's research capabilities and to strengthen its partnerships with other institutions.

The new facility will be part of a broader effort to promote economic development in Louisiana through research and innovation. The university is committed to working with partners in industry and government to translate research findings into practical applications that can benefit the state and its residents.
